

A propos de ce livre

Ceci est une copie numérique d'un ouvrage conservé depuis des générations dans les rayonnages d'une bibliothèque avant d'être numérisé avec précaution par Google dans le cadre d'un projet visant à permettre aux internautes de découvrir l'ensemble du patrimoine littéraire mondial en ligne.

Ce livre étant relativement ancien, il n'est plus protégé par la loi sur les droits d'auteur et appartient à présent au domaine public. L'expression "appartenir au domaine public" signifie que le livre en question n'a jamais été soumis aux droits d'auteur ou que ses droits légaux sont arrivés à expiration. Les conditions requises pour qu'un livre tombe dans le domaine public peuvent varier d'un pays à l'autre. Les livres libres de droit sont autant de liens avec le passé. Ils sont les témoins de la richesse de notre histoire, de notre patrimoine culturel et de la connaissance humaine et sont trop souvent difficilement accessibles au public.

Les notes de bas de page et autres annotations en marge du texte présentes dans le volume original sont reprises dans ce fichier, comme un souvenir du long chemin parcouru par l'ouvrage depuis la maison d'édition en passant par la bibliothèque pour finalement se retrouver entre vos mains.

Consignes d'utilisation

Google est fier de travailler en partenariat avec des bibliothèques à la numérisation des ouvrages appartenant au domaine public et de les rendre ainsi accessibles à tous. Ces livres sont en effet la propriété de tous et de toutes et nous sommes tout simplement les gardiens de ce patrimoine. Il s'agit toutefois d'un projet coûteux. Par conséquent et en vue de poursuivre la diffusion de ces ressources inépuisables, nous avons pris les dispositions nécessaires afin de prévenir les éventuels abus auxquels pourraient se livrer des sites marchands tiers, notamment en instaurant des contraintes techniques relatives aux requêtes automatisées.

Nous vous demandons également de:

- + *Ne pas utiliser les fichiers à des fins commerciales* Nous avons conçu le programme Google Recherche de Livres à l'usage des particuliers. Nous vous demandons donc d'utiliser uniquement ces fichiers à des fins personnelles. Ils ne sauraient en effet être employés dans un quelconque but commercial.
- + *Ne pas procéder à des requêtes automatisées* N'envoyez aucune requête automatisée quelle qu'elle soit au système Google. Si vous effectuez des recherches concernant les logiciels de traduction, la reconnaissance optique de caractères ou tout autre domaine nécessitant de disposer d'importantes quantités de texte, n'hésitez pas à nous contacter. Nous encourageons pour la réalisation de ce type de travaux l'utilisation des ouvrages et documents appartenant au domaine public et serions heureux de vous être utile.
- + *Ne pas supprimer l'attribution* Le filigrane Google contenu dans chaque fichier est indispensable pour informer les internautes de notre projet et leur permettre d'accéder à davantage de documents par l'intermédiaire du Programme Google Recherche de Livres. Ne le supprimez en aucun cas.
- + *Rester dans la légalité* Quelle que soit l'utilisation que vous comptez faire des fichiers, n'oubliez pas qu'il est de votre responsabilité de veiller à respecter la loi. Si un ouvrage appartient au domaine public américain, n'en déduisez pas pour autant qu'il en va de même dans les autres pays. La durée légale des droits d'auteur d'un livre varie d'un pays à l'autre. Nous ne sommes donc pas en mesure de répertorier les ouvrages dont l'utilisation est autorisée et ceux dont elle ne l'est pas. Ne croyez pas que le simple fait d'afficher un livre sur Google Recherche de Livres signifie que celui-ci peut être utilisé de quelque façon que ce soit dans le monde entier. La condamnation à laquelle vous vous exposeriez en cas de violation des droits d'auteur peut être sévère.

À propos du service Google Recherche de Livres

En favorisant la recherche et l'accès à un nombre croissant de livres disponibles dans de nombreuses langues, dont le français, Google souhaite contribuer à promouvoir la diversité culturelle grâce à Google Recherche de Livres. En effet, le Programme Google Recherche de Livres permet aux internautes de découvrir le patrimoine littéraire mondial, tout en aidant les auteurs et les éditeurs à élargir leur public. Vous pouvez effectuer des recherches en ligne dans le texte intégral de cet ouvrage à l'adresse <http://books.google.com>

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. PREFACE

IN Lewis and Short's 'Latin Dictionary' (1880) the etymological element is both fragmentary and uncritical: a lexicographer cannot fairly be expected to be also an etymologist. Bréal and Bailly's 'Dictionnaire Etymologique Latin' (1885) embraces but two-thirds of the words used by ordinary classical Latin writers, and the etymological element in it is avowedly secondary. Pre-scientific work like that of Hintner and Zehetmayr, both of whom published in 1873, is hardly worth mentioning: it was not till the publication in 1876 of Brugmann's discoveries that anything was known about vocalic laws.—For other languages also etymological dictionaries are rare. For Umbrian we have Bücheler, for Oscan Zvetaieff, for Greek my 'Etyma Graeca,' for Gothic Feist, for German Kluge, for Old Slavonic Miklosich, for Armenian Hübschmann: for Irish and Welsh, Old Norse and Anglosaxon, Lithuanian, Zend and Sanskrit, we have no complete etymological dictionary at all.—It may thus appear, both that an etymological Latin dictionary was wanted, and that it was not easy to compile one. Kluge had Weigand to work on: I have had to find my material where I could.

The dictionaries which I have chiefly used are the following

Latin—Lewis and Short.	English—Skeat.
Greek—Liddell and Scott.	Old German—Schade.
Gaulish—Stokes ('Celtic Declension').	Modern German—Klug.
Old Irish—Zeuss.	Lithuanian—Kurschat.
Middle Irish—Windisch.	Lettish—Ulmann.
Modern Irish—O'Reilly.	Prussian—Nesselmann.
Welsh—Pughe.	Old Slavonic—Miklosic.
Gothic—Balg.	Armenian—Hübschmann.
Old Norse—Vigfusson.	Zend—Justi.
Anglosaxon—Leo, Grein.	Old Persian—Spiegel.
	Sanskrit—Böhtlingk.

Excluding (as all writers of etymological dictionaries have agreed to do) Proper Names,¹ I find that the words of the classical period of Latin literature, down to the death of Trajan in A.D. 117, use 26,326 words: all of which except 4320 sufficiently explain their own formation, are derivatives or compounds of these 4320 words. In the present work I have treated 3055 of these 4320 words being those found in the sixteen Latin authors of the first rank (fragments in each case excluded): viz., in chronological order, Plautus, Terence, Cicero, Caesar, Catullus, Lucretius, Sallust, Vergil, Horace, Livy, Tibullus, Propertius, Ovid, Persius, Tacitus, Juvenal.² Setting aside so-

¹ Among these I reckon some words sometimes spelt with a small initial, *Ciris Cocles Februa Liburna Pege Surena Triones Venetus*: which I have nothing new to offer. On the other hand I have included in my work the words *ligustrum polluceo puniceus quirito veneror*, being derivatives of Proper Names but successfully concealing the real character.

² I need hardly apologise for omitting the conjectural *hir thyius*, the misreading *matta*, and the 'ghost-words' *liroe nico*: the proper readings are—Cic. Fin. 2. 23 (from Lucilius) *hirsizon* (whatever that may correct), Propert. 4. 7. 49 *Chio*, Ov. Fast. 6. 674 *lata*, Plaut. Poen. 13 *collyrae*, Plaut. Truc. 624-625 *viceris* . . . *vicerim*.—I have omitted also Adverbs and Conjunctions of which the sole peculiarity lies in the termination (such being sufficiently explained by Stolz or Victor Henry); and loanwords from the Greek of which the originals are sufficiently treated in 'Etyma Graeca' or (in the case of derivatives) in Liddell and Scott.

380 words of obscure origin, which cannot as yet be classified, these 3055 words fall into the following three classes :

- I. 'inherited' words, having cognates in other Indoceltic languages : about 1130.
- II. 'manufactured' words, derivatives or compounds of the words in class I. : about 930.
- III. 'imported' words, borrowed from Greek or other languages : about 615.

So much for the scope of the work : next for details of its arrangement. The sign † preceding a 'head-word' (i.e. the first word of an article) denotes that the word is borrowed from some foreign language. (It is often however difficult to draw the line : Latin *derivatives* from loanwords, e.g. *topiarius*, are left unmarked.) Loanwords which are not 'head-words' are marked either by † preceding, or by being put in brackets : thus after the translation of each head-word I give in brackets the more interesting of the English words borrowed (often through many stages) from the Latin word. For details on these English loanwords I would refer to Skeat's 'Concise Etymological Dictionary of the English Language' : where he puts several words under one head I have given the leading word and added the sign '&c.'. It is of course often difficult to decide whether a word is borrowed or not : I suppose Gothic *haban* to be borrowed from Latin *habeo*, the Teutons originally having no word for 'have' (the Welsh still have none, and in Latin itself we may say 'est mihi pater' for 'habeo patrem'). When two loanwords in any language are nearly identical in form the sign † is put before the first only, e.g. †*balneum balineum*, †*πάσης δάπης*.

A numeral after a word denotes that the word concurs in form with another word, or even several other words, of

distinct origin: I have thus been obliged to divide *praesto* into two words, *stringō* into three, *ruō* into four.

Cognates in Umbrian and Osco-Sabellian are given only when they are in themselves instructive. The cognates from other languages are given in the following order: Greek, Celtic, Teutonic, Balto-Slavic, Armenian, Arian. I have not thought it necessary to give a cognate from Welsh when I had given one from Irish, nor from Old Norse or Anglosaxon or German when I had given one from Gothic, nor from Lettish or Prussian when I had given one from Lithuanian.—When possible, Nouns are given in the Nominative Singular (a rule embracing words from Hesychius which he gives in some other case): Verbs are given in Zend and Sanskrit in their roots, in Teutonic and Old Slavonic (unless the translation shows otherwise) in the Infinitive, in other languages in the First Singular Present Indicative. Roots, stems, and words found only as the first element of a compound are marked by a dash following; which is itself accented (◌́) when we know from Verner's Law (that after a barytone vowel a Tenuis becomes in Teutonic not an Aspirate but a Media) that such was the original pitch-accent. (The accent, when marked, always denotes pitch-accent or 'tone,' not stress-accent.) Greek disyllabic Prepositions are marked as paroxytone. Enclitics in Greek have a grave accent, in other languages a dash preceding. Sanskrit words unaccented in the MSS. are left unaccented.—Hypothetical forms are denoted either by prefixing an asterisk or by putting a letter in brackets: e.g. *ἐλαί(F)ον* denotes that *ἐλαιον* was originally *ἐλαίFον*.—The position of a single letter (or combination of letters) is denoted by a dash; e.g. "a-" denotes initial *a*, "-a" medial *a*, "-a" final *a*.—When a word is given partly in Roman partly in Italic type, the part in italics is alone to be compared with the other words mentioned.—The sign

'fr.' may roughly be read as 'from,' more exactly as 'connected with'; it denotes that the two words have the same root, or are 'Ablauts' of each other.

The translation of a word, where no translation is given, is the same as that of the next-preceding translated word; translated, i.e., into English (for convenience' sake the translation is sometimes into Latin or Greek). Parentheses are not considered as interrupting the sequence of construction. The abbreviation 'E.' followed by a comma denotes that the English cognate has just been given as a translation of some other cognate word: the abbreviation 'E. E.' denotes not 'Early English' but that the English cognate has just been given and that one or more English cognates follow. A Latin or Greek word quoted simply for the sake of its form is left untranslated.—When a word is the same (as to both form and meaning) in two related languages, I write it only once: e.g. "Zd. Sk. *mā-* measure" shows that *mā-* means 'to measure' alike in Zend and Sanskrit. Similarly "Ags. E. *fin*" denotes that Anglosaxon *fin* and English *fin* are cognate words and of the same meaning.

As a rule a vowel not marked long is to be reckoned short. But to this rule there are some limitations:

(1) When a vowel in Latin stands before two consonants I have endeavoured to mark it according to its etymological quantity, not according to the quantity it may have acquired from the nature of the consonants; and where the etymology is obscure or ambiguous the quantity, if marked, is not to be taken as a guide to the possible etymology, *fōrma* may go with *ferio* 'strike' (as *τύπος* 'form' with *τύπτω*) though in deference to authority I have marked the *o* long (see note at end of preface):

(2) As to marks of length in other languages than Latin: I have, following my authorities, left unmarked the quantities of Umbrian, Oscan, and Welsh vowels. I have

marked Gothic and Sanskrit **ē ō**, though always long, but left unmarked Lithuanian **y ū ē o** and Old Slavonic **i y u a** which likewise are always long. In Irish and Old Norse I mark vowels as long, not with an accent: in Anglosaxon I write **eā eō** (not, as Sweet does, **ēa ēo**), and use **ae oe** for the long diphthongs, **ä ö** for the short. In Lettish I write **ē** not **eh**, in Old Slavonic **ē** not **ě**.

A note of interrogation at the end of an article is meant to apply to the words preceding after the last colon or semicolon. In the explanation of a Compound, e.g. *manifestus*, the note of interrogation implies that the second half of the Compound is of obscure origin.—Where no etymology at all is given, it is to be understood that none yet proposed is satisfactory: in many of such cases the ordinary (unscientific) etymology may be found in Lewis and Short. The following 360 derivations are, so far as I know (it is difficult in such matters to speak with certainty), my own:

I have as far as possible avoided the use of strange symbols. In words given (in small capitals) as from the 'Ursprache,' the 'sonant' liquids are denoted by a dot below, and the long sonants are further marked as long: for the consonants corresponding to *i* and *u* I use *j* and *v*, to be pronounced like English *y* in *yet* and *w* in *wet* respectively: the 'velar' gutturals I write with a *v* following (the sign *k-v*, see *equus*, denotes that the *k* and the *v* are distinct elements), the distinction of 'fixt' and 'labialisable' velars being left to be gathered from a comparison of the cognate forms or from the notes in Part II.—In Old Umbrian I write *đ*, not *đ* or *ř*; in Lithuanian *iė*, not *ë*; in Old Sla-

vonc **h**, not **ch**. In Armenian, for the aspirates I write **ph**, **th**, **kh**; for Hübschmann's 25th letter I use **thš**, for his 33rd **ths**. In Zend I write **aē** not **aē**, **ç** not **s**, **q** not **hv**. For the Hebrew Aleph I give no sign, for Ayin ' , for Shevā ' ; for He I write **h**, for Cheth **h**.

A few points of pronunciation may be noticed :

- (a) Umbrian **ç** or (New Umbrian) **š** = Eng. *s* in *see*; **đ** = Eng. *th* in *the* :
- (β) Welsh **au** = German *ai* (Eng. 'Aye'), **aw** = Eng. *ow* in *cow*; **dd** = Eng. *th* in *the*, **ll** = an aspirated *l* (i.e. *h* + *l*, or, when final, *l* + *h*) :
- (γ) Gothic **gg** = Eng. *ng*, **q** = Eng. *qu* :
- (δ) Lithuanian **y** = Eng. *i* in *machine*; **ū** = *u* + *o*; **ė** and **o** are pronounced 'close' (see p. xv); **ą** and **ę** are now pronounced as *a* and *ā* respectively. The 'falling' tone is marked ' on a short vowel, ' on a long; the 'rising' tone (as in Eng. 'Why?') is marked ~ or ^ . A consonant followed by *i* + another vowel is pronounced soft, like German **k** in *kind* as opposed to **k** in *kahn* : **sz** = Eng. *sh*, **z** = Eng. *z*, **ž** (Lettish **š**) = French *j* (Eng. *s* in *leisure*), **c** = Eng. *ts*, **cz** = Eng. *ch*.
- (ε) Old Slavonic **y** = a (long) 'modified' or French *u*; **ę** = French *in* in *vin*, **ę** = French *on* in *bon*. Of the consonants, **š** = Eng. *sh*, **č** = Eng. *ch*, while **z** **ž** **c** are pronounced as in Lithuanian.
- (ς) Armenian **λ** is a 'guttural' *r*, **ր** a 'hard' *r*; **j** = Eng. *dz* in *adze*, **j** = Eng. *j* in *jet*; **š** = Eng. *sh*, **z** = Eng. *z*, **ž** = French *j* (see above), **c** = Eng. *ts*, **č** = Eng. *ch*.
- (η) Zend **aē** = German *ai*, **ao** = German *au* : **c** = Eng. *ch*, **ç** = Eng. *sh*, **j** and **z** are pronounced as in English : **q** = Eng. *h* + *w* (as in the dialectic Eng. pronunciation of *when*). The pronunciation of **đ** and **hh** is unknown.
- (θ) Sanskrit **y** as Eng. *y* in *yet*; **c**, **ç**, **j**, as in Zend (Sanskrit **sh** has a stronger aspiration than **ç**). The 'linguals' (or 'cerebrals') **ṭ** **ḍ** **ṭh** **ḍh** **ṇ** are pronounced 'with the tip of the tongue turned up and drawn back' (Whitney), but are not by us distinguishable from ordinary dentals.

The notes in Part II. on the various cognate languages embrace only the words quoted in Part I., and of course are not meant to be exhaustive.

I have to acknowledge many obligations to Professor Macdonell, Margoliouth, Nettleship, Rhys, and Sayce; to Dr. Neubauer, Dr. Whitley Stokes, F. Y. Powell, and my colleague W. M. Lindsay; and, on points of natural history to my brother, H. T. Wharton, editor of 'Sappho'.

I hope in some future year to complete the subject by an analysis of the 1265 'sub-classical' words found in fragments of our sixteen authors or in less important authors of the classical period. But in England even the worst etymologist meets little encouragement.

E. R. WHARTON.

OXFORD, *St. David's Day*, 1890.

NOTE ON HIDDEN QUANTITIES

It seems that certain combinations of consonants in Latin lengthened the preceding vowel, others shortened it, others (which is most perplexing of all) sometimes lengthened sometimes shortened it, probably in different dialects; and, to complicate matters still more, each of our rules has numerous exceptions. For the determination of these 'hidden' quantities I have used Seelmann's 'Aussprache' pp. 69-108, Marx's 'Hülfsbüchlein,' and (for the Romance languages) Gröber's 'Vulgarlateinische Substrate Romanischer Wörter' in Wölfflin's 'Archiv'. The authorities on which these writers rely are:

- (α) the testimony of Latin Grammarians ('Gramm.'), and the old spellings of *i ū* as *ei ou*:
- (β) the usage of Plautus and Terence, who before Mute + Liquid allow a vowel to be long only when it was long by nature:
- (γ) the marks given in Inscriptions ('Inscr.'), the *i* carved taller than usual, the other long vowels accented:
- (δ) the Greek transcription of Latin words ('Gk.'), *i ū* = *ει ου*, *ē ō* = *η ω*:
- (ε) the evidence of the Romance languages ('Rom.'), which represent *i ū* by *i u* but *ī ū* by *e o*, and *ē ō* by close *e o* (pronounced i.e. with the tongue convex) but *ě ŏ* by open *e o* (pronounced with the tongue flat).

A. Combinations which lengthen the preceding vowel:

- (α) **ns nf** (according to Cicero and the Latin Grammarians), Cic. *cōsuevit insanus cōfecit infelix*, Inscr.¹ and Gk. *cōsul*, Gramm.

¹ The signs 'Gramm.' 'Inscr.' 'Gk.' 'Rom.' in these pages may be read 'according to the Latin Grammarians, inscriptions, the Greek transcription, the Romance languages': i.e. the abbreviation denotes the source from which we learn the quantity of the vowel.

and Rom. *insula*, Inscr. *inferus*. Yet one dialect must have allowed the natural quantity, Gk. *Constantinus* (1st century A.D. *cōsul* (6th century, beside *Constantinus*!), Priscian *mānsi*, Rom. *cōsiliū cōnficio infans*.

- (β) *nqv* in *quīque* (Inscr. Gk. and Rom.), *ngv* apparently in *pīngu* (Rom., Gröber 'Grundriss der Romanischen Philologie,' p. 50 note). Yet not in one dialect, Rom. *propīnguus lingua ūguis*.
 (γ) *gn* (according to Priscian), Inscr. *dignus signum*. Yet not in one dialect, Gk. *cōgnitus*, Gramm. and Rom. *dignus*, Rom. *lignū pīgnus pūgnus signum*.—Apparently also *gm* (Marx p. 2), Inscr. and Rom. *pīgmentum*, Gk. *sēgmen*.
 (δ) *ct* from *g + t* (Seelmann pp. 78, 90), Inscr. *lēctus* ('bed') *līctor* Rom. *lūctor*. Yet not in one dialect, Gk. and Rom. *lēctus*.—So *x* from *g + s* (Seelmann pp. 78-79, 91) seems to have had a lengthening effect, Inscr. *māximus*, Inscr. and Gk. *vēxillum*.

B. Combinations which shorten the preceding vowel :

- (α) *nt* (Marx p. 1-2), Gramm. *cōntio* from *coventio*, Gk. *frōntem mōntem pōntem vēntus*. Yet one dialect allowed the natural quantity, Gramm. *nūntius*, (Inscr. Gk. and Rom. *quīntus*), Inscr. *frōntem*, Rom. *fōntem mōntem pōntem* (so Gröber in his articles in Wölfflin's 'Archiv'; in his 'Grundriss' p. 522 he makes the *o* short).—So *nd*, Rom. *harūdo hirūdo ūndecim* (from *ūnus*), cf. *splēndeo* (Lithuanian *splēndžiū*) from *σπλήν*, *vīndex* (Βίνδιξ) from *vēnum*. Yet not in one dialect, Gramm. *harūdo hirūdo*, Inscr. *nōndum nūndinum*, Rom. *frōndem* (Gröber is ambiguous, as above) *prēndo vēndo*.
 (β) *l + any consonant*, Gramm. *remāllcum* (ῥῆμουλλκοῦν), Rom. *corōlla* (from *corōna*) *ūltra *īlcm* (from *īlicem*: so even with a vowel between, *pūlegium*), and *vāllum* whence Anglosaxon *veal*. Yet not in one dialect, Inscr. *ūltra vāllum*, Inscr. and Rom. *mille ōlla villa*, Rom. *anguilla favilla māllus stilla trālla*: which cannot be *lengthenings*, as the Romance languages substantiate *capillus cucūllus* ('cuckoo') *ille mōllis pūllus* ('dark') *sēlla vīllus, pūlmo pūlpa sīlva*.
 (γ) Before Mute + Liquid a vowel is generally short, and hence *ēbrius nūtrix* (Plautus) show in the Romance languages a short root-vowel.

C. Combinations which in one dialect lengthen, in another shorten, the vowel :

- (a) **nc** lengthens the vowel in Inserr. *cūctus fūctus jūctus sāctus* and so *conjūx*, Gramm. and Rom. *ūctus*, Rom. *cīctus tīctus pūctus*. Yet one dialect allowed the natural quantity, Rom. *pūctus ūctus* (Seelmann p. 90).—But it shortens the vowel in Rom. *jūctus* (ἰουκτος) *ūctia* (οὐκία).
- (β) **r** + another consonant lengthens the vowel in Inserr. *ārca ārvum hōrtus quārtus* (*ārma pērnix* are marked as barbarisms), Rom. *cōrtina pērtica*. Yet not in one dialect, Plaut. *ērgo*, Gramm. *ārs ārx pārs*, Gk. *cōrtina pērtica*, Gk. and Rom. *cīrcus fōrtis vīrga*, Rom. *fūrnus stērcus*.—But it shortens the vowel in Rom. *lārdum* (*lāridum*) **lūrdum* (= *lūridum*) *fūrca* (which I would derive from *fūr*). Which represents the natural quantity, *fīrmus* (Inserr., Seelmann p. 92, cf. *fūlus*) or *fīrmus* (Rom., cf. *fīdes*), we cannot tell; nor of course where the etymology is unknown, Inserr. *sērvus* Rom. *ōrca* do not prove that the vowel was by nature long, nor Gk. *fōrmica ōrbis ūrna* Rom. *stīrps ūrceus* that it was by nature short. More perplexing still, our authorities sometimes differ, Gramm. Gk. and Rom. have *fōrma* but Gk. also *fōrma*, Inserr. and Rom. *ōrdo* but Gk. (and Irish) *ōrdo*, Inserr. and Rom. *ōrnō* but Gk. *ōrnō*, Inserr. *vīrgo* but Rom. *vīrgo*.
- (γ) **s** + any consonant lengthens the vowel in Gramm. *hēsternus*, Gk. *fōssa*, Rom. *hibiscum ūsque*, and cf. Priscian's *austrum* from *ōstrum*. Yet not in one dialect, Gk. Rom. *fōssa*, Rom. *lūscus mīsceo nōster vēster tēsta*.—But it shortens the vowel in Gk. *ōstium* (Inserr. and Gk. *ōstium*), Rom. *fēstus* (Inserr. and Gk. *fēstus*) *fūscus* (Inserr. *fūscus*) and perhaps *gūstus* (cf. γεύω), and I think in Gramm. *āper lanīsta* and Gk. *crāssus*. Where the etymology is unknown, or consonant with either supposition, we cannot tell whether the vowel was by nature short or long, Inserr. *manifestus vīscus* Inserr. and Rom. *trīstis* Gk. *sōspes* Gk. and Rom. *cūstos* Rom. *ēscā fūstis hīspidus* do not prove that the vowel was by nature long, nor Gk. *rēstis* Gk. and Rom. *crīsta* Rom. *fīstula fūscina mūscā mūstela* that it was by nature short. Sometimes too our authorities differ, Gk. has *bēstia* but Rom. (and later Gk.) *bēstia*, Gk. *crīspus* but Rom. *crīspus*, Inserr. *crūstum* but Rom. *crūstum*, Inserr. and Gk. *prīscus* but Gk. also *prīscus*, Rom. has both *pīscis* and *pīscis*.

INTRODUCTION

THE languages spoken by the nations of Europe, with isolated exceptions (the ancient Etruscans, the modern Basques of north Spain, the Magyars, Turks, Esthonians, Livonians, Ugrians, Finns, and Lapps), and of Asia from the Caucasus to Ceylon, resemble each other sufficiently to justify the supposition that they all descend from one common original or 'Ursprache'; the speakers of which, issuing from Scandinavia in search of a warmer climate, separated in various directions. The Teutonic stock remained in Scandinavia or occupied central Europe; the Celtic race proceeded to the British Isles, Gaul, and Spain; the Italic to Italy; the Albanian to the east side of the Adriatic; the Hellenic to Greece; the Balto-Slavic to eastern Europe; the Armenian, probably through Thrace and Asia Minor, to the district south of the Caucasus; the Arian to Persia and India.

The family of languages here described has been denoted by several names, none quite satisfactory. The quasi-biblical term 'Japhetic' has died out, though the corresponding term 'Semitic' has survived: all the other terms hitherto suggested labour under the defect of insinuating that the race came originally from India, a view wholly untenable. Max Müller's 'Aryan,' from Sanskrit *aryas* 'a high-caste man,' has the merit of being short, and of lending itself to the convenient compound 'un-Aryan,' but is in pronunciation indistinguishable from 'Arian,' the

term applied by the Germans to Zend and Sanskrit: of the three compound designations, 'Indo-Germanic,' by far the worst, as excluding the Celtic branch, has been adopted by the Germans, Bopp's 'Indo-European' is cumbrous and not quite accurate, while the French 'Indo-Celtic' is logical enough, as giving the two extreme branches of the family, and might perhaps be adopted in the modified form 'Celtindic'.

Albanian, with a literature dating only from the 17th century, is of too little importance to be here noticed: sufficient information on it will be found in Gustav Meyer's 'Albanesische Studien' (1883-1884). The remaining seven branches of the family may be thus distributed:

(1) Teutonic:

Gothic, preserved in Ulfilas' translation of the New Testament, 4th century of our era.

Old Norse or Icelandic, with literature from the 12th century.

Anglosaxon or Old English, from the 7th to the 13th century.

Old High German, with glosses from the 8th century; *Middle* do., the language of the Nibelungenlied, 12th century; *New* do., from the 16th century.

(2) Celtic:

Gaulish, a few remains derived from Latin authors or inscriptions.

Old Irish, glosses of the 8th and 9th centuries: *Middle Irish*, the earliest MS. A.D. 1100.

Welsh, glosses of the 8th and 9th centuries: the earliest MS. of the 12th century.

(3) Italic:

Latin, the first inscription perhaps 300 B.C.; earliest author (Plautus) 224 B.C.

Umbrian, preserved in the Eugubine Tables, the first part ('Old Umbrian,' perhaps 200 B.C.) written in Etruscan characters, the last ('New Umbrian,' perhaps 100 B.C.: from V. b. 7 to the end) in Latin.

Osc-Sabellian, inscriptions from about 200 B.C.

(4) Greek, from Homer (B.C. 800?).

(5) Balto-Slavic or Lithu-Slavic:

Lithuanian, with literature from the 16th century.

Lettish, from the 16th century.

Prussian or Old Prussian, of the 15th and 16th centuries, now extinct.

Old Slavonic, Church-Slavonic or Old Bulgarian, from a translation of the Bible by Methodius and Cyrillus, 9th century.

(6) *Armenian* or Old Armenian, 5th to 11th century.

(7) *Arian*:

Zend or Old Bactrian, the language of the Avesta, the oldest parts of which are said to date from 1000 B.C.

Old Persian, the language of the Behistun inscriptions, about 500 B.C.

Sanskrit, said to date from 1000 B.C., and divided into two periods, Vedic and Classical Sanskrit, the latter from about 400 B.C.

The earliest Indian inscriptions date from about 250 B.C.

The Ursprache, if the speakers of it had known how to write, would perhaps have had the following alphabet:

Vowels: I, U, Ū, E, O, A: Ī, Ū, Ū̄, Ē, Ō, Ā.

Diphthongs: EI, OI, AI: EU, OU, AU: ĒI, ŌI, ĀI: ĒU, ŌU, ĀU.

Sonants: M, N, L, R: M̄, N̄, L̄, R̄.

Liquids: M, N, L, R.—Semivowels: J, V.

Explosives:

Labial P, B, PH, BH.

Dental T, D, TH, DH.

Palatal K, G, KH, GH.—Velar KV, GV, KHV, GHV.

Sibilants: S, Z.

The Ursprache must have possessed a 'modified' or French u (which I write ū), short and long, written sometimes u, sometimes (apparently later) i: it appears frequently in Latin, see p. 119, less often in Greek (e.g. ἴψος-ἴπος) and Old Slavonic (see *stipula*), and in Sanskrit in ul il as representing sonant L.—The Arian languages sometimes have i where other languages have a, see *pater*; but the i may be due to foreign influence, and hardly necessitates the theory of an 'indefinite' vowel (which Brugmann writes as an inverted e), in sound between a and e.—Diphthongs beginning in a long vowel are rare.—For sonant or vocalic r Sanskrit uses a single letter, ṛ:

the other sonants in Sanskrit, and all the sonants in other languages, are represented by a liquid + a vowel (usually *before* the liquid) differing in different languages, and of course different in the short form and in the long. A sonant may stand either in the accented syllable, e.g. **re** in Eng. *pretty*, or (more often) in the unaccented, e.g. **en** in Eng. *seven*, **le** or **il** in Eng. *able*, *evil*.

Whether we ought to recognise 'spirants' **j** and **v**, as distinct from the semivowels **j** and **v**, is extremely doubtful: the 'spirant' **v** is nowhere distinguishable from the semivowel **v**, and the 'spirant' **j**, distinguished only in Greek (where it appears as initial ζ, see *jam jugum jūs¹ zōna*), may be only a strongly-pronounced semivowel **j**.—The Tenuis Aspiratae, **ph**, **th**, **kh**, **khv**, are rare except in Greek, in which φ θ χ represent both kinds of Aspirates.—Palatals and Velars alike are usually called Gutturals: the palatals seem to have been pronounced nearer the front of the mouth (as **k** in Eng. *kill*), the velars further back (as **c** in Eng. *cool*). The palatals are preserved in the Western languages (Teutonic Celtic Italic and Greek), but in the Eastern (Balto-Slavic Armenian and Arian) become spirants: the velars in the Eastern languages are written as **k g gh** (or their equivalents) with no **v** following, while in the Western languages they vary in different words, i.e. are sometimes written as **k g gh** (or their equivalents) with no **v** following, and sometimes with a **v** following or (dialectically) as Labials or (in certain positions) Dentals. It is thus possible that we ought to recognise two different sets of velars, which have been kept apart in the Western languages and confused in the Eastern: the 'fixt' velar in the roots given below under *secō garriō congius gradus* shows no sign of a **v** in any language, the 'labialisable' velar given under *sequor veniō ninguīt* regularly shows a **v** (or is labialised) in the Western languages. But how the

two sets were distinguished in pronunciation, or how to represent them, does not appear.

The perhaps insoluble question of the origin of language does not fall within our province. It may suffice to observe that onomatopoeic words, imitations of sounds, are rare in the daughter-languages, and must have been correspondingly rare in the *Ursprache*. Of this kind in Latin are the following :

- (1) from human sounds: Nouns *amita mamma pappus* (all infantile), *balbus stloppus*: Verbs *lallō pappō* (both infantile), *screeb*, and see *bibō*: Interjections *ā ō, hahae hau hei hēja heu hui, ēheu ehō dhē, ēm ēn, bat, fū fī, *vā* (spelt *vah* or *vaha*), *ātāt tat tatae, prō prox, st, heus*.
- (2) from sounds of animals: dog see *baubor*, sheep *bālō*; chicken *pīpō*, cuckoo *cucūlus*, hoopoe *upupa*, owl *būbō strix tū*, raven *crōciō*.
- (3) from inanimate sounds: *strepō stridō tīniō tintinō, tax tuxtax* (these two expressing the sound of blows).

A kind of Onomatopoeia appears in the initial Reduplication of some words: either the whole root is given twice over, *cincinnus* (of obscure formation) *tintinō ululō*, or to it is prefixt the initial consonant + *i* in Verbs, *gignō sīdō sistō titubō* (see also *jējentō jējūnus*), *u* in Nouns, *cucurbita susurrus*.

The *Ursprache* was doubtless, like each of the daughter-languages, a congeries of different dialects. In one of these initial *s* before a Tenuis was dropt, whence we have by-forms in *sp-* and *p-*, *st-* and *t-*, *sc-* and *c-*, see p. 127. So also the variation in the ending of certain numerals, see *decem novem septem*, may have been dialectic.—Other pairs of forms are more difficult to understand, see under *juvenis, rāpum rēte, quattuor quinque sex, alcēs grūs turdus*.—Apparently one dialect preferred (as Old Slavonic does) open syllables, i.e. those ending in a vowel: hence the occasional instances of Metathesis in the case of liquids, *on-no* see *umbilīcus umbra unguis*, *ir-ri circus*, *ur-ru socer*, *er-re crēdō terreō*, and in one dialect the vowel in such

cases was lengthened, see *frētus plēnus*. So the two ways of representing \bar{L} and \bar{R} in Latin point to different dialects in the Ursprache: one had $L\bar{A}$, $R\bar{A}$, the other $*\bar{a}l$, $*\bar{a}r$, and thence (if a consonant followed) AL , AR .

In the Ursprache, as in the daughter-languages, the majority of words were disyllabic; and we may call the first part of the word the 'root' and the rest the termination, without supposing that either root or termination was ever used independently. The root, and to some extent the termination, were subject as to their vocalism to definite changes of form ('vowel-gradation' or 'Ablaut'), probably originally depending on grammatical construction: i.e. the word acquired a stronger meaning by copying the vocalism of some forcible word, an ordinary meaning by copying the vocalism of most ordinary words, a weaker meaning by copying the vocalism of less emphatic words. Such Ablaut may be of three kinds: any vowel may be either long or short, certain vowels (especially *e* and *o*) may interchange, *e* (and in some few cases *o*.¹) may disappear entirely. Latin examples of Ablaut are the following:

- (1) vowel long or short:

l *liquor-liquō strīx-vibēx-vibrō*.

u *nūbō-prōnuba pūsus-pusillus pūteō-puter rūdō scūtum-scutica*, and see *suppus*.

e *lēx-legō rēx-regō sēdēs-sedeō tēgula-tegō*, and see *sēpiō*.

o *gībūmus mōles-molestus* (?) *nōs-noster prō-pro- scrōfa-scribis vōx-vocō*, and see *cōmis cūpēs offa persōna*.

a *ācer-alacer flāgitō-flagrum indāgō-agō lābor-labō mācerō-macō māne-manus sāgiō-sagāx stō-destinō vādō-vadum*, and see *mamma*.

Sonants: *ŋ gnārus-ingens*, *l flāvus-fulvus lātus-tulī largus-indulgeō*, *ŕ grātus-hortor prāvus-por- marceō-morior pars-portiō*.

- (2) different vowels:

e-o: *meditor-modus nectō-noceō nectō-noxa* (?) *pendō-pondus precor-procus regō-rogō sedeō-solium sequor-socius tegō-toga*. So *gemō-gumia jaciō-jocus niteō-nota*, and see *foveō-faveō memini-moneō*.

¹ So sometimes *a*, see *ambi- ante arduus horreum latus, sōrex sūdus*.

Ē-ō only in the terminations *-tēr -tōr* (both later shortened).

Ē-a *imbēcillus-baculum*, and see *langueō reor*: in *satus* beside *sēmen* the *a* may be pretonic for *e*.

ō-a only in *dōnum-dare nōscō-agnitus*: in *catus* beside *cōs* the *a* may be pretonic for *o*.

(3) vowel omitted:

ē: (α) in a diphthong: *ēi dīcō-dicāx fidō-fidēs*, *ēu dūcō-dux trūdō-trudis*, *ēū jūgis-jugum liber-libet*.

(β) initial before an explosive in *dens sum*.

(γ) between two explosives, one disappearing in Latin, see *hospes sīdō quartus*.

(δ) between explosive and liquid, the latter becoming a sonant, *N* see *tenuis*, *L* *pulmentum*, *R* *extorris fors mordeō sors storea urgeō*.

(ε) between liquid and explosive, the former becoming a sonant, *M* *infīt* (?), *N* *infula* (?), *R* *fortis gurgēs pōscō* (= *poroscō) *turpis*, and with long sonant *flaccus*.

o: (α) in a diphthong, see *faveō-fuī*:

(β) between two explosives, *-pte*:

(γ) between explosive and liquid, the latter becoming a (long) sonant, *lāna*:

(δ) between liquid and explosive, the former becoming a sonant, *pulcer*.

So in terminations:

(1) vowel long or short: Nom. *abiēs ariēs pariēs*, Gen. *abiētis* &c.

(2) different vowel: *E-o* *lītera-lītus temperō-tempus*, and see *annus*.

(3) vowel omitted: *E* between consonants, *aes ansa fār*, and see *amnis annus*, *corylus sōl*, *ascia mēnsis*. So *Ē* of the (original) Nom. drops in the oblique cases, *ācer pater* and on this analogy *ager* &c.; and so *ō* of stem *nepōs-neptis soror-sobrīnus*, or of Nom. *carō-carnis* cf. *homō-hominis*, and see *collis cornīx*.

A phenomenon akin to Ablaut is the insertion of a nasal before explosive or sibilant at the end of the root: *pampīnus nimbus*, *prehendō* (?), *sanciō*, *fringilla jungō langueō nīnguit pungō*, *fimbriāe pinsō*.

When a new idea arose, or a modification of an old idea, it was apparently expressed in the Ursprache not by a

wholly new word, which would have been unintelligible, but by giving some existent word a fresh termination. Sometimes the initial consonant of the new termination necessitated a change in the final consonant of the 'root' or first syllable: hence we may explain occasional fluctuations in the root-ending, between **b** and **bh** *cubó*, **k** and **g** *pāx pāgina*, **kv** and **gv** *mūgilis sūcus*.

A sufficient account of the various terminations of words in the Ursprache is given in Brugmann's 'Grundriss,' vol. ii. The following list of Noun-endings contains only those found in words with which in this work we are concerned, with one or two examples of each ending:

(A) Vowel-stems ending in

- (1) **o** (Fem. **ā**): **mo** *fūmus fāma*, **no** *pugnus lūna*, **lo** *oculus pila*, **ro** *gnārus fibra*: ***jo** i.e. **io** *lanius ascia* or **eo** (the 'plebeian' form) *cuneus linea*, **vo** *flāvus*: **bho** *acerbus probus superbus morbus*, **to** *lectus crūsta*, **do** *crūdus*, **ko** *juvencus vacca* **kvo** *fūscus fūrca*. With two consonants, or consonant + sonant: **mno** *auctumnus* **mno** *fēmīna*, **nto** *ventus* **ndo** *merenda*: **bdo** = ***blo** *plō duplus* or **plō** *discipulus*: **tmō** *optimus*, **tqō** *prīstinus*, **tlo** = **clo** *sacellum* or **clo** *surculus periculum*, **tro** *monstrum dextra*, **dhlo** = ***blo** *blō vēstibulum fībula* or by Dissimilation **bro** *cribrum crēbra*: **skvo** or **sko** *vēscus ēsca pōsca*.—Compound endings:

COMPARATIVE ETYMOLOGY

(Letters given in Capitals are those of the Ursprache.)

LATIN.

- I** remains, see e.g. *is pīx vir*; before **j** it = **ē** *jējānus*, see *jentō*; unaccented before **r** (from **s**) it = **e** *anser*. Final it = **e** *ante mare*, which often drops (orig. before an initial vowel), *ad- amb- ast aut et hic ob post quot tot ut, instar siremps*.—Dialectic compression by omission of unaccented **i** (of whatever origin) between consonants, see *forceps sēsqui- sinciput, splendō jāncus ūncia, ōrnō ūsurpō ārdēō, ipse abdōmen, multīcia antestor fastīdium portōriūm pōstulō, pōnō sūmō*, and below on **v**. Contraction: **i** + **hī** = **ī** *bīmus*, **ae** + **hī** = **ae** *praeda*.
- U** *cutis furō lucerna*. After Lingual it = later **v** *calvor mīlvus pēlvīs salvus silva, lārva*: Metathesis after **DL** *dulcis*. Final it drops *mox*, see *vix red-*.
- Ū** written **u**, later **i**: *clueō culullus domus frutex jungō lacruma lubet lunter luō manubiae numerus pugnus pungō supō surpiculus sus- opp. cliens culillus domicilium fritillus igitur lacrima libet linter litō manibiae nimis pignus pingo dissipō sirpus sirempse*; see *finus ligō miser nimbus redivivus stipula stringō supercilium tingō* and below on the short sonants. Unaccented before **r** it = **e** *socer*. Dialectically it = **o** *sobolēs*.
- E** *ego ierō sequor*; dialectically it = **i** *cicer cicur filix fistula in milium nisi niteō pinna plicō sileō singulī sinister spiciō tribus via vindicō vitulus*, see *quinque* and below on **M N**.—Before nasal + **g** it = **a** *anguilla frangō*: before **l** + any consonant but **v** it = **u** *mulceō ulcus ulmus*, see below on *adulter indulgeō*; before **v** it = **o** *foveō moveō novem novus ovō sovos* or (see on **o**) **u** *juvō pluit viduus*. It = **o** after initial **s** from **sv**, *socer sonus sopor soror*, or initial **c** from **kx**, *colō coquō corium cortex* (also **u**, *cucumis culīna*).—Pretonic **e**, unless saved by analogy, = **a**: in Noun-stems in **eā** *palea*, **nō** (**nā**) *alnus catēna magnus stagnum taberna*, **lā** *tabula*, **rō** *aper sacer*, **kā** *vacca*, **ī** *ās ratis vas*, **ū** *gradus manus*, **jēt** *artēs*, **īd** *lapis*; Verb-stems in **i** *capiō faciō jaciō sapiō*, **ē** *candeō maneō pateo*, **ā** *amō flagrō*, **isko** *nanciscor paciscor*;

- and Prepositions *ad- af-*.—Unaccented *ε* (i.e. in any syllable but the first) before two consonants remains *haruspex* or (dialectically, see above) = *i* see *sēmis*; before a single consonant it = *ū* i.e. *u* *famulus nūcupō oculō* or *i* *arbiter compitum diligō inquilinus inquinō memini oppidō permitēs*, unless preserved by 'Recomposition' *ēlegans intelligō neglēgō impetus*.—Final *ε* drops (see on *ι*) in *ceū haud neg-legō nōn vel.*
- o *domus ob potis*; dialectically = *ū*, i.e. *u* or *i*, *locus-lucūna-īlicō, coluber-colpa-culpa dolus-sēdulō locusta-lucusta polcer-pulcer, poliō-pudet, clupeus-clipeus cunctus-cingō recuperō-reciperō umbilicus-imbilicus*, see *cunctor cupiō gumia humus luxur murmur umbō umbra ungō, cinis imber similis*, and below on *ι. ρ.*.—Later = *u* in atonics *cum* (Prep., cf. *hunc sunt*) and before consonant in final syllable of polysyllables *centum filiū genus rōbur* &c. Initial *vo* remains by analogy in *vocō volō volvō*, else later = *ve* *vegeō vellus venia verbum vertō vespa vester* (or, pretonic, *va, varius vacō*, see below); so initial *vo* from *gvo* = *ve vescor vetō*. Initial *quo* remains by analogy in *quot quotus*, else = *que* (see on *ρ*) or *qui* (see *ε* above) *quisquiliæ* (o *canis* see below).—o before *v* = *a* *avis caveō cavus faveō favilla farus gravis lavō pavō*, unaccented *u* (see above on *Α*) *exuō*.—Pretonic *o*, unless saved by analogy, = *a*: in Noun-stems in *ā* *ansa valva ō valgus* (or in these two the *al* may = *ē*) *iō radius varius rō amārus atrōx* (and see *catus*), *i* *canis*; Verb-stems in *ē* *cracens* (see *gracilis*) *placeō, ā vacō*.—o final = *e* *ille iste tame* (see *tam*).—Contraction: *o + o* = *ō prōlēz*, and so *o + a cōgūtō*.
- A *agō caper pater*. Unaccented before two consonants it = *e* *convexus identidem necesse peregrē sollemnis sublestus* or *i* (see above on *ε*) *concinnus*, or, before *l* + another consonant, *u*, *adulter*, see *indulgeō*; before a single consonant it = *o* *aboleō* (cf. *Hecoba* from *Ἑκάβη*), later *ū* (see above on *ο*), i.e. *u* (*contubernium*) or *i* *adminiculum conquiniscō dēstinō vēstibulum*, which before *r* = *e* *properus recipērō sistere*.—Contraction: *a + ō* = *ō dō, nō*.
- ī *acclinis vītex vīvus*; dialectically = *ē* *avēna, reus* (so *covehriū*, see *cūria* = **co-vēriō*), and see *spīca villa*.
- ū *cūpa fūmus mūs*.
- ū spelt *ū* *fūcus mūtulus mūtus pūteō scrūta stūpa*, see *supparum trūgonus*, or *ī* *ficus mītulus mītis pītūla scrīnium stīpa, siparium trigonus*, see *fīō frīgō gibbus līmpidus mīrus spīrō stīpes*: also *oe* *amoenus* (see below on *οι, eu, αυ*).
- ē *fēmina rēs rēx* (to show the length spelt also *ee* see *bālō penna vehemens* or *ehe ehem mehe vehemens*; later *ae* *faecundus laevis nae praelum vaenum, tcaepe tchaela tnaenia tpaalex tscaeprum*, or *oe* *foecundus foetus moeta*); dialectically it = *ī* *sīnciput subtilis*, see *farīna villa* and perhaps *spīca*, and below on *EI, AI*.

ō *dōnum nōscō pōtus* (to show the length spelt also **oh oh proh**); dialectically it = ū i.e. ū *fūr hūc jūcundus nūcus nūtriō praestūlor ūlna ūpiliō ūter ūva*, see *septuāgintā*, or *ī renūdeō sīspes* (see *sōspes*).—Pretonic, unless saved by analogy, it = ā *ācer plācō*.

ī *fāgus māter suādeo* (to show the length spelt also **ah ah vah** or **aha aha vaha**, see *trans*).

Original vowel-length is often denoted by doubling the consonant following:

ī *immō, hinnīō* (?), *illicō ille millia pilleus villa, cippus lippus quippe, gibbus, littera-littus mittō vitta* (and *†sagitta* ?), *crissō* (*†sarissa*).

ū *dummetum nummus, cunnus, cucullus culullus culleus, cuppa stuppa †supparum suppus, friguttiō futilis guttiō gutta muttiō muttō, buccina muccus †tuccetum, suggillō, fussus russus*.

ē *penna strenna vennūcula, bellua fellō helluō mustella pelluis sella* (from *sedda*) *stelliō tellūs, susurrus terra* (cf. *Fest. †crēterra* from *κρητήρα*).

ō *nonne, lolligō, porriciō*.

ā *damma flamma lammina, annus pannus, †allēc allium allūcinor caligō, narrō parricida sarriō, vappa* (cf. *applūda sappīnus*), *attāt battuō quattuor stlattārius, accipiter bacca †braccae †bracchium flaccus vaccillō, nassus*.

Conversely, for a short vowel + two consonants may be written a long vowel + a single consonant, *āmentum cōturnīx stipendium sūspiciō*.

A long vowel is shortened before

- (1) another vowel, or **h** + vowel: *ī diēs hiō proprius violō nihilum, ū cruor pruīna ruō¹ ruō⁴, ē deinde neō reor* (see *ceu*), *ō* (from *ov*) *cloāca, ā trahō*.
- (2) **nt** *contiō fontis ventus* (but *mēntula nūntius* probably earlier forms), **nd** *vindicō* (but *nūndinum prēndō*).
- (3) final **m** *clam*, **r** *prōsper*, **d** *sed*.

EI remains in *Interj. hei*, else later = *ī dicō fīdō liveō*, dialectically *ē lēvis* and see *ceu deus*. Before vowel it = **e** *eō quēō screb*, see *trēs*.

OI later = **oe** *foedus* (Subst. and Adj.) *moenia soera*, later still *ū* i.e. *ū cūnae cūra fūscus lūdus mūnus mūrus mūtō mūtō pūmex ūnus ūtor* or *ī clivus fīdus* (Subst.) *tibia* or (dialectically, see above on *ī*) *ē fedus* (Subst. and Adj.): pretonic, unless saved by analogy, it = **ae** *caecus* (later mis-spelt **oe**).

AI later = **ae** *aevum caedō scaeva* (later mis-spelt **oe** *coelum coena hoedus moereō poenitet*), or dialectically ('rustic') *ē cēna glēba hēdus hērēs obscēnus pēne sēculum sēta tēter*. Before vowel, or **h** + vowel, it = **a** *aēneus ahēneus*, in Compounds **e** *prehendō*. Unaccented AI = *ī sī*, and see *olivum*.

EU remains in Interjs. *žheu heu heus*, else = **ū** i.e. **ū** *dūcō gūstō lūbricus lūgeō lūridus lūx nūtō plūma prūma rūctō* or **ī** *līber*.

OU = later **ū** *clānis cūdō lūcus mūcus publicus rūbigō*, dialectically **ō** *pōb-licus rōbigō*; both with shortening before vowel, *clūāca cloāca*. Pre-tonic **ou**, unless saved by analogy, = **au** *auris aurōra frans*, see *autumō*.

AU *augeō caulis hauriō*; dialectically = **ū** (vulgar?) *clūdus cūleus cūpō frūstrā frūstum nūgae rūdus sūdus* (also, to show the length, spelt **ou** *roudus*), **ō** ('rustic') *adōrea clōdicō clōdō cōleus cōpō cōrus crōciō nōgae ōlla ōmen ōriga ōs ōstium ōtium plōdo plōstrum rōdus sōdēs* and see *fōns*. Unaccented **AU** = **ū** i.e. **ū** *adūlor indūtiae obtūrō* or **oe** *oboediō* or **ē** *obēdiō*.

ŌU before vowel = ***ōv āv** *oclāvus*: *bovis*, like *bōs*, is un-Roman.

ĀU before vowel = **āv** *nāvis*; before consonant (after loss of **i**) it = **au** *claudō gaudeō*, dialectically (see above on **AU**) **ū** *clūdō*.

Dialectically **h** is prefix to an initial vowel, *haud hauriō haveō herus hic hodiē hōrnus humerus* and Interjs. *hau hei hēja hēm*. In *hālēc hālū-cinor harūdō helluō herciscor hērēs honus* it is doubtful whether it is original or prefix. It is added between vowels to prevent hiatus in *ahēneus nihil*.

SONANTS.

M = **em** *geminū temnō, decem novem septem*, or (see above on **E**) **im** *simul*; when unaccented in trisyllables it = **ūm** i.e. **um** or **im** *aestimō autumō optumus*.

N = **en** *centum dens densus ensis genū mens mensus mentum tenuis, ingens juvenis lūmen* (after **v** with Contraction in *nōnus*; = **e** [or **ē**?] before **x** *exta*), or (see above on **E**) **in** *in- infit (?) infula inter lingua pinguis, dominus terminus tintinō vigintī* (= **i** before **gn** *ignis*).

Dialectically omitted after **st** *clandestinus frūstum mediastinus praestigiāe*.—Dialectically **ri rī rū** become **er**, *hibernus lucerna noverca ter cervix, acerbus quater terō*, see *tēstis*.—**rs** = **rr** *cerrītus currō errō farra garriō horreō horreum parreō parricīda porrum terreō torreō verrēs verrūca*, but before **t** = **s** with compensation *fāstigium fāstus tēstis*, before **n** drops *cēna*: unoriginal **rs** remains *accērsō dorsum ursus*, but dialectically = **ss** *dossum pessum* or after a long vowel *suūsum* and so (with compensation) before **c** *pōscō*.

¹ I.e. the vowel is lengthened to make up for the dropping of one or more of the following consonants: the syllable thus retains its weight though its elements are reduced in number.

- j** initial *jecur jocus juvenis*, drops before **i** *iciō igitur*. Between vowels it usually drops, see *plūs*, but remains (lengthening the vowel before it) in Reduplication *jējentō jējūnus*, onomatopoeic words *ējulō*, and terminations *saturēja*. It = **i** (in the classical dialect) after Liquid *lanius veniō*, *alius folium liēn ōpiliō saliō*, *caesariēs*, **v** *viētus* (?), **d** *medius*, **c** *socius*: drops after **h** *herī* **p** *spuō* **s** *suō*.
- v** initial *vehō vir vocō*: remains before **u** + **l** *vulgus vulnus vulpēs vultur vultus vulva* (unless **c** follow, *ulciscor*), drops before **u** (or **ū**) + any cons. but **l**, *uncus unda urbs urceus urgeō urtica uxor ūrina*: drops before Lingual *lāna liquō rādix repens*.—Intervocalic **v** drops (dialectically) before **u** *reus deus toleum* (*dea olea* are due to analogy), **saluus* (whence *salvus*) from **salūvus*; and after **u** *duo exuō pluit puer suus tuus viduus* (but **uv** remains after **j** *juvenis juvō* or before **i** from **j** *exuviae pluvius*). Unaccented **vi** or **ve** later (1) after a short vowel drops the **i** or **e** and vocalises the **v**: thus **ov** = **ou** = **ū** *būbulus cūria nūndinae* or dialectically **ō** *fōmes cōntiō fōns nōndinae nōnus*, **av** = **au** *audeō autumō raucus saucius*; (2) after a long vowel or diphthong drops entirely (for *claudō gaudeō*, in which the **i** first drops and then **āv** becomes **au**, see above on **āu**): *trahō, fuligō vīta fībula nītor ūligō ūmeō, aequus praecō praedēs*.—Postconsonantal **v** remains after Lingual *alvus arvum*, but dialectically = **b** *gilbus corbus ferbeō sorbum*, or (as in Oscan) assimilates after **l** *mella mollis palleō sollus* (cf. *milliō* beside *mīlvus*); remains (spelt **u**) after **q** from **k** *equus*, and after **s** *suādeo-suāvis* (but *sē sērius sī sordēs*: drops before **ū** *sūdor*); is vocalised later after **n** *tenuis*, **t** *quattuor*, **d** *arduus duellum* (but, later still, initial **dv** = **b** *bellum bis bonus*, medial **dv** = **v** *suāvis*); drops after **f** (from **dh**) *fallō foris forum*, and in an atonic syllable after **d** *dē dis-dīrus*.—Final **v** (after loss of **-e**) = **u** *ceu* (cf. *neu seu*).
- p** *nepōs pater plēnus*; drops initially before **t** *tilia* (?) **s** *sabulum* (?) *st sternuō studeō*, and between **s** and **t** *hostis* (in Compounds the **s** drops, Fest. *vō-pte* = *vōs*) or **l** *liēn*. It assimilates before Labials *summus suffiō*, = **m** bef. **n** *damnum omnis somnus*. Final **p** remains, *volup*; *ab ob sub* were originally used only before Mediae, and the **b** drops with compensation before **s-p** *āasper* or **m** (from **s-m**) *ōmentum*.
- b** (rare) *labium lambō lūbricus*; dialectically = **v** *sērum* and perhaps *arvina ferveō* †*vārō vatillum vervēx*. Before **n** it = **m** *dominus*; before **l** from **d** it remains in *pūblicus*, elsewhere = **p** *amplus duplex exemplum manipulus* (so before **l** from **d** *discipulus manipulus*): before original **l** it = **p** or dialectically **m**, *concipilō-cumulus stipula-stimulus*.
- BH** initial before vowel = **f** *far ferō fungor* &c., dialectically **h** *haba hara* (?) *hariolus herba horctum horreum* and perhaps *harēna hircus* (sometimes omitted, *ariolus, arēna ircus*) or **b** *barba battuō bulla im-buō*: before Lingual it = **f** *frangō frāter frīgō dē-frūtum* &c., dialectically **b**

blaterō.—Medial it dialectically = *f scrōfa*, else *b glūbo ambi- albus orbus* &c., which before *n* = *m amnis scamnum*, before *l* either remains *scabellum* or (dialectically) = *p scapulae*, before *pl* drops *amplus*.

T pater tendo trēs; drops between *r* and *m vermina*, *p* and *s ipse*, *xv* and *v quartus*, later between *s* and *l lis locus*, and when final after *s* in Nom. os. Before Nasal it = *s *resmos pesna*, later drops with compensation *rēmus peena* (so *nt, sescēnī vicēnī*) or doubled consonant *penna cunnus*: before *l* it drops if initial *lātus* (Part.), if medial = *c saeculum* (see *lis*) and so before *l saeculum*. Assimilates before *c ecce siccus vacca*, cf. *equis*: drops before *s nox*.—*TT* = *ss fessus passus* or (after consonant) *s densus dorsum hirsūtus mensus*, but before *r* = *st capistrum lustrum*: *tt* from *ti-t* = *t* after consonant, *antēstor fāstidium portōrium*.

D dicō duo rōdō: dialectically = (1) *l* (as in some Oscan dialect, see *†famulus*), initial *lacrima largus lautia limpidus lingua*, between vowels *adūlor aemulus* (?) *ancile* (?) *aquilus baliolus calamitās consilium-solium-consul-exul †famulus mīluis* (?) *mulier oleō poliō reluvium remelīgō* (?) *scālae sileō squālor stilus †strigilis*, before consonant *almus mella* (*sella*) *ūltrā-ūlva*, after consonant *amplus-duplex pūblicus* and *mālus*: (2) *r* (cf. Varr. L. L. 5. 110 'perna a pede,' quasi *pedre), *apor ar careō cūr* (cf. *quirquir* = *quidquid* Varr. L. L. 7. 8) *mereō muria* (?) *varius, accērsō mergō virga*, and (perhaps Dissimilation, for *l*) *glārea merula plōrō*.—Before *m* it drops with compensation *āmentum flāmen squāma*: before *l* it assimilates *allex*: before *r* it remains dialectically *quadru-* and by analogy *quadra*, else = *t atrōx nūtriō tactrum ūtrem* and so before *r* *uterus*: before *d* drops with compensation *crēdō*: before *c* assimilates *accērsō*. For *dv* see on *v*.—*DT* = *ss assis pessulus cassus gressus lassus spissus* or (after long vowel, diphthong, or consonant) *s suāsūm caesius tonsa*, but before *r* or *l* = *st frūstrā* (*pestulus*).—*D* after *n* dialectically (cf. Campanian *ipsannam* = *operandam*) assimilates in *grunnio †mannus*, cf. Plaut. Mil. Glor. 1407 *dispennite . . . et distennite*.

DH initial = *f faber faciō fellō fāmus furō, fallō foris, frūstum*. Medial it = *b* (dialectically *f*) before *r glabro- libra rubro- umbra*, after *r arbor barba verbum*, after *m* or *n lumbus* (*infit*), and in the classical dialect after *u* or *ū jubeō rubeō* (*rūfus*) *ūber*: elsewhere it = *d caedō fidēlia fidēs¹ fodiō gradus rudis vadēs vadum vidulus viduus* (which, see above on *D*, dialectically = *l caelebs melior stilus*, or *r caerimōnia merus ergā firmus*), and so between *r* and original *v arduus*. (This *d* before *r* = *t vitricus*, and so before *r* or *l iterum rutilus*.) Final it = *d ad-*, dialectically *f af*.—*DHT* = *ss assula*, after consonant = *s infensus*, but before *r* or *l* = *st monstrum* (*astula*).

K = c *acclinis cis decem*, later dialectically = **ch** *pulcer*: before **v** it = **q** *aquilus equus queror* or (after loss of **v**) **c** *canis*: dialectically = **g** in *singuli viginti*. Before Nasal it = **g** in the accented syllable *dignus magmentum*, dropt by analogy *dēni*: before **t** dialectically assimilates *†brattea*, or drops with compensation *cōturnix sētius* (cf. *pōstulō* from **pōscitulō*, and see *percontor*).—**KS = x** *coxa dexter ex saxum sex* (dialectically **ss** *†amussim assis nassa pessimus tossillae*), or, before **sc**, **s** with compensation *compēscō discō pōscō* (see also on *miscēō*), and so before **c** *sēscēni*: before **l** this drops with compensation *ālā māla talus*, cf. *paullus tōlēs* (see *tonsillae*). So **KTH = x** *texō*, or **s** before **t** *testa* or after **r** *ursus*: before a Liquid this drops with compensation *tēla tēmō*.

G *ego genus regō*. This in the accented syllable remains before **m** *agmen sagmen* (?), in the unaccented syllable drops with compensation *subtēmen sufflāmen*: before initial **n** it (later) drops *narrō nāscor nāvus nictō niteō nōscō*: drops before medial **j** *mājor*.—**GS = x**, which before **l** drops *pālus*.

GH before vowel = **h** *haedus haruspex hasta helvus hiems holus homo horreō hortor hortus humus* (dialectically omitted *anser* and sometimes *aedus aruspex olus ortus*), *vehō* (dialectically omitted *via*, and with contraction *bimū*): dialectically **f** *folus fovea*, **g** *gemini gilvus gutta* (which before final **a** = **c**, *praefica*, see below on **GV**). Before or after consonant it = **g** *glārea grāmen grātus* (so before **l** *trāgula*), *angō fingō lingō mingō pinguis*, which before **j** drops with compensation *ājō mējō*, and so in the unaccented syllable before **n** *inānis*, before **t** = **c** *nectō vectis*, + **s** = **x** *vexillum* (dropt before Liquid *vēlum*, see *vēna*): dialectically **f** *flāvus, infula*.

KV (1) as a 'fixt' velar, with no sign of labialisation in any language, = **c** *callum carpō cicer collis cortex coxa culcita dulcis lucerna lūcus mūcus secō vacillō* and before consonant *crāssus crepō* (dialectically assimilated before **t** *blatta*; before **j** it = **g** *pulegium* or drops *bājulus pālējum*). This **c**, + **s**, = **x** *axis exta lux*, see *nox*; which drops before Liquid *lūmen lūna*. (2) as a labialisable velar = **qu** (i.e. **qv**) *aqua conquiniscō coquō frequens inquilinus liquō loquor quaerō quatiō -que quēō quercus quī quīnque* (dialectically, as in Oscan, **p** *crepō palpō prope quippe*), also later written **c** *arcus ceu colō coquō corpus jecinoris jocus locus quercus*: always written **c** before **u** (*obliquus* late) *cum* (Conjunction) *cūra jecur oculus* or consonant (dropping before **d** *dōdrans* and later between **r** and **t** *fortis*), e.g. before original **j** *farcio licium prōvincia socius* (before **n** this **c** = **g** *lignum*), and so when final *ac nec*.

GV (1) as a 'fixt' velar = **g** *garriō gelus gibbus, augeō ligō*, which before **t** = **c** *auctumnus luctor*, dialectically dropt *autumnus*. This **g**, + **s**,
